

Press release / Communiqué de presse

WAN – TRACK the RFID solution for full traceability , Using WAN-TRACK allow you to have the full traceability of your products since the raw material to the final product .

WAN-Track have been developed by NRM and Nexess , two GNMS member's.

GNMS is the first European Economic group of interest, gathering more than 2000 p and 600 M€ turnover for nuclear certified raw material.

GNMS proposed a complete package of raw material, and associated documentation, direct from the mill or stockist.

GNMS proposed the full package of , classified raw material, such as

- Pipes
- Fittings
- Flanges
- Forged pieces
- Accessories

In Stainless steel, Carbon steel, or alloy .

Due to the GNMS structure , the customer have a direct access to the mill prices and capabilities .

To assure the full traceability all the products sells by GNMS are RFID equipped and WAN-TRACK ready .

With a simple RFID reader the GNMS customer have a direct access to all the information related to the products .

These information could be ,amended and transferred all along the equipment manufacturing process .

At he end the utilities maintenance team could have access to all the information, about the manufacturing process but also could added their own for maintenance .

WAN-TRACK is presented for the first time on the GNMS booth .
